APUC No. 2 Sheet No. 29 1st Revision RECEIVED Cancelling: Original Sheet No. AUG 2 7 2007 STATE OF ALASKA REGULATURY COMMISSION OF ALASKA **Alaska Power Company** RULES AND REGULATIONS 2. Nature of Services Offered 2.1 Electric Service The Company provides 60 cycle (Hertz) alternating current, either single or three phase, depending upon available curcuits. Standard voltages available are 120/208, 120/240, 208, 240, 277/480, and 480, depending upon available circuits. Other secondary voltages may be made available with prior approval of the Company's engineering department. It is the responsibility of the customer to pay for special equipment needed to supply non-standard secondary voltages or regulate voltages closer than standard service provides. Service is also available at the Company's standard primary distribution and transmission voltages, depending Т upon available curcuits. Standard distribution voltages depending on location are 2400/4160, 7200/12470, Т 14400/24900 and 19900/34500. Customers receiving service at these voltages will be responsible for furnishing, installing and maintaining all facilities and equipment past the agreed point of delivery, including required circuit breakers, transformers, and line extensions. The Company reserves the right to require the customer to furnish circuit breakers with appropriate protective equipment at the point of delivery The Company shall, unless otherwise provided, construct, operate and maintain the entire facilities, whether overhead or underground, necessary to delivery electrical energy to the point of receipt of service by the customer. The point of receipt of service by the customer (unless otherwise provided in this Pursuant to: TA 760-2 Effective: October 11, 2007 Issued by: Alaska Power Company Michael Sandt By: Michael Garrett Title: Executive Vice President

of the equipment necessary to serve. In addition, where the duration of temporary service is to be less than one month, the applicant will be required to advance a sum of money equal to the estimated bill for service. Where the duration of temporary service is to exceed one month, the applicant will be required to meet the deposit requirements set out in Section 6.

If, during the term of the temporary service, the character of a temporary customer's operations changes or it appears that the duration of the service may be substantially longer than stated in the application, the Company shall re-classify the service as permanent and will apply the deposit and line extension rules as outlined in this tariff.

The Company shall not allow a temporary service connection to continue longer than 12 months unless for good cause shown the Company has approved an extension of time for temporary service or unless application for permanent service has been made by the customer.

The installation and equipment will comply with applicable technical and safety standards, practices and codes to protect the customer, the general public and the Company's employees. Such codes include the National Electric Code, the National Electric Safety Code, and City and Borough requirements.

3.3 Seasonal

The Company may provide seasonal electrical service to customer premisis that are utilized on a seasonal basis.

### Alaska Power Company

State of Alaska Public Utilities Commission

Such a device should also be equipped with a time delay mechanism so that the motor will not be disconnected by momentary fluctuations in voltage.

2. Overload Protection: Since the intense heat caused by overload may seriously damage the motor, the customer should install a device that will disconnect the motor if overload occurs. Fuses, thermal relays or circuit breakers which are specifically designed to operate when excessive current occurs, are the devices used for this purpose. Where the customer receives three-phase service, such protective devices should be connected in all phases.

3. Single-Phasing Protection: Where the customer receives three-phase service, a relay should be installed which will disconnect the motor from the lines in the event one phase of the line becomes open.

4. Reverse-Phasing Protection: For three-phase installations of electric cranes, hoists, elevators, pumps and the like, the customer should install relays which will disconnect the motor from the line in the event of phase reversal.

5.6 Inspection

The customer is responsible for installing and maintaining his electrical wiring and equipment in accordance with applicable local, state and national electric and building codes as evidenced by certificates of approval from the appropriate inspection body.

5.7 Addition of Load

Any customer shall give the Company reasonable

notice, in writing, of any plans to increase a given load past the capacity of the Company's equipment installed to serve that particular location. The Company may require the advance payment of contributions or advances to construction and the execution of related documents as outlined in Section 7 of this tariff prior to the commencement of any installation of added or enlarged facilities. If the customer fails to notify the Company of additional loads and such additional load damages the Company's equipment, the customer is liable for such damages and repairs or replacement of damaged equipment.

Sheet No.

41

### 5.8 Undesirable Load Characteristics

The Company may refuse service to, or remove service from, any installation which, in the judgement of the Company, will adversely affect the operation of the Company's system or its service to other customers.

The Company reserves the right to immediately disconnect service when the customer's load makes it impossible for the Company to provide service according to the voltage and frequency standards established within Sections 5.4 and 5.9.

In less serious situations, removal of service will occur only after delivery of a shut-off notice to the customer's service location specifying the problem and scheduling disconnection 15 days later if the customer has not corrected the situation or otherwise adequately responded to the shut-off notice. Where immediate correction is not possible, the customer's response shall include arrangements made for repair or replacement of equipment. A completion date will then be established and the disconnection will be postponed until the day following the agreed completion date.

Alaska Power Company

#### RULES AND REGULATIONS

6. Service Conditions

#### 6.1 Application for Service

Application for normal service connections will be made using the Company's standard power service order form and do not require a customer signature. Special contracts will require a signature from the customer. In special cases for large industrial or commercial customers, a special contract may be written and shall contain such provisions and stipulations as may be necessary or desirable to protect the interest of both the Company and the customer. All fees shall be paid at the time of the service application or prior to construction. Acceptance of service, with or without a signed application or contract, shall be subject to compliance with the terms of the applicable rate schedule or schedules and the customer service policies contained herein in this tariff.

If an application for service is made by two or more individuals, the Company has the right to collect the full amount owed from any one of the applicants.

6.2 Connection and Disconnection

All orders for connection or disconnection of electric service must be executed by the customer, or by a customer's attorney-in-fact or duly authorized agent, by an officer or duly authorized agent of an organization, association, corporation, political body or governmental agency, or by either applicant in the case of a joint application. The applicant is

responsible for services up to the later of the disconnection date requested by the customer or three working days after the Company receives the written request to discontinue service.

The Company shall establish service to existing facilities within five working days following a request by an applicant who has been accepted for service by the Company. For the purpose of this paragraph, "existing facilities" means customer facilities which are ready and acceptable to the Company, where the Company needs only to install a meter, read a meter or turn on the service.

If within the five-day period referred to above, the Company establishes service at the customer's request during a period other than regular working hours, the Company may impose service call-out charge for the service connection.

If the Company cannot establish service to new customer facilities within thirty days after it receives an application, it shall, within fifteen working days from the date of application, advise the applicant in writing of the reason for the delay, any interim type of service which may be available, and an estimated date when the requested service will be provided. For the purpose of this paragraph, "new customer facilities" means customer facilities which require the Company to do more than install or read a meter before service can be provided.

When the Company finds it is unable to meet any previously scheduled date for establishment of service under the above paragraph, it shall advise the customer in a timely manner of the revised date upon which service will reasonalbly be available.

STATE OF ALASKA REGULATORY COMMISSION OF ALASKA

Alaska Power Company

### RULES AND REGULATIONS

Sheet No.

7. Service Extensions

7.1 General Provisions

The Company will provide, upon written application, service to any reasonably accessible location within the Company's service area under the following guidelines.

7.2 Standard Service Extensions to Active Location

Any permanent service extension whether single-phase or three-phase, overhead or underground, primary or secondary will be constructed by the Company within the following parameters.

A. Project construction shall not be initiated before the execution of a written estimate agreement between the property owner and the Company detailing the estimated share of the costs to be borne by the Customer requesting service. Also documented will be the terms and conditions of payment, and the estimated date of completion. This document is to be signed and agreed to by both parties to which it refers.

B. The Company shall furnish, construct and provide materials, connections and labor amounting up to, but not to exceed the value of \$3,000.00, as a "New Service Credit" to any new customer requesting a service extension; provided the aforementioned requirements are met. All costs (agreed to per Rule 7.2A) incurred beyond the New Service Credit are to be paid by the Customer as an Advance-in-Aid of Construction.

### Alaska Power Company

State of Alaska Public Utilities Commission

unpaid balance to reflect new Customers which have connected to that service extension. Each new Customer of said line extension will be charged a prorated share of the original line extension cost. The Company will refund and credit, as appropriate, any subsequent advances for construction to those Customers who previously advanced funds for connection to the completed line extension. No persons however will be eligible to receive a refund and/or credit, resulting from a line extension advance, subsequent to the lapse of 5 years from the date of initial connection to said line extension. The Company will not receive funds greater than those which were originally associated with the initial costs of the extension. Nor will any Customer refund exceed the amount of the original Advance-in-Aid of Construction.

Upon request the Company will make available a report or the computations that support any "Buy in's" pertaining to any Advances-in-Aid that were made in conjunction with a service extension that has not been fully repaid.

If a new customer connects to an existing service extension which has not been fully repaid or lasped (five years after initial connection) the Company will collect a pro-rated Buy in Fee which will be refunded to the existing customers connected to the service extension. The new customer will be required to pay their pro-rated portion of the cost of the service extension to the pole their service or new service extension connects to so that all customers using the same poles will make the same Advance-in-Aid of Construction. This Buy in charge will be treated as an Advance-in-Aid of Construction and will be refunded to the customer paying the buy in charge, in accordance with Rule 7.4.

Pursuant to Order No.1 of Docket U-94-5

Effective: June 17, 1994

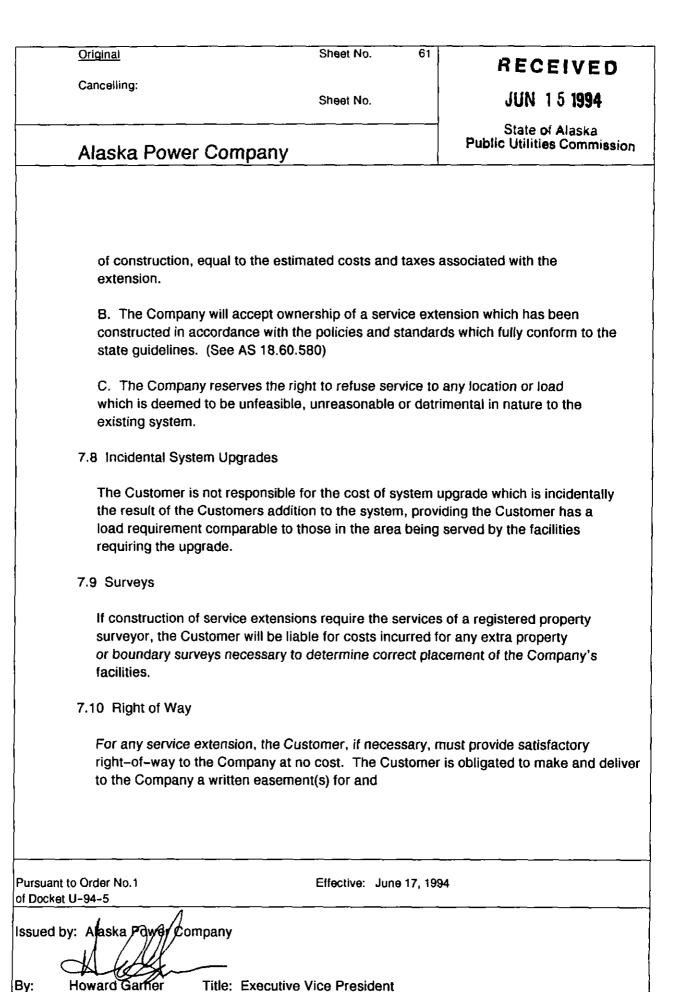

Issued by: Alaska Power Company

By:

Howard Garner

Sheet No. 60 Original RECEIVED Cancelling: JUN 15 1994 Sheet No. State of Alaska **Public Utilities Commission** Alaska Power Company For Example: If there are two existing customers on pole #5 and one on pole #3, a new customer at pole #3 would pay 1/4 of the outstanding balance Advance-in-Aid of Construction related to poles #1, #2, and #3 as a Buy in charge. This Buy in charge would then be refunded to the three original customers reducing their respective Advancesin-Aid and creating a new Advance-in-Aid of Construction which would pertain to the new customer at pole #3. Sample Buy in Fee Calculation 20% 40% 60% 80% 100% existing -X--X--X--X--X pole new new new new new pole pole pole pole pole 1 2 3 5 4 If the outstanding balance for the three original customers advances totaled \$5000. The customer at pole #3 had a advance of \$1000 and the customer at pole #5 each had a advance of \$2000. The average outstanding balance per pole would be \$1000. A new customer connecting at pole #3 would pay \$750, which equals the average advance per pole times the number of poles used divided by the number of customers utilizing those poles (\$1000 \* 3)/4). The \$750 would be used by the company to refund \$250 to each of the three existing customers. 7.7 Construction of Subdivision Service Extensions and/or Idle Facilities A. Any person requesting a service extension to an inactive service location or subdivision shall make a Contribution-in-Aid of Construction prior to commencement Effective: June 17, 1994 Pursuant to Order No.1 of Docket U-94-5 Issued by: Alaska Rower/Company Howard Garner Title: Executive Vice President By:

## Alaska Power Company

State of Alaska Public Utilities Commission

#### 8.3 Meter Locations

Meters and associated service switches must be installed in a mutually agreed location where the meters will be readily and safely accessible for installation, reading, testing, and inspection and where such activities will cause the least interference and inconvenience to the customer. The meter must be accessible to Company employees from the outside of the applicant's building, unless written permission is given by the Company for any other location. The customer shall provide the meter location without cost to the Company.

Customer equipment, including meter sockets, shall not be installed on Company property, including Company poles, unless specific written permission is given by the Company.

Meter sockets shall be mounted external to a building wall, ie., they should not be flush mounted or built into a wall such that the conduit system feeding the meter is concealed inside a building wall.

Prior to energizing multi-meter installations such as apartments, condominiums, zero-lot line residences, etc., each location that the meters serve must be clearly identified by one inch letters on each meter base. If the numbering system changes, the property owner is responsible for updating the labeling and notifying the Company. When the meter is installed, the owner or his authorized representative must be present to physically verify that each meter serves the location designated by the labeling.

#### 8.4 Primary Service

Pursuant to Order No.1

Where primary service is supplied, the customer, at the customer's expense, shall furnish, install, and maintain on his premises such switches, transformers,

Individual meters are not required under the following circumstances:

(1) For transient multiple-occupancy buildings and transient mobile home parks, including but not limited to, hotels, motels, dormitories, rooming houses, hospitals, nursing homes, and mobile home parks for travel trailers;

(2) For commercial unit space which is subject to alteration with changes in tenants as evidenced by temporary construction of non-loadbearing walls or floors separating the commercial unit spaces;

(3) Where alternative renewable energy resources are used in connection with central heating, ventilating, and air conditioning systems; and

(4) In common building areas such as hallways, elevators, reception areas, water pumping facilities, and electric hookups for motor vehicles.

8.9 Change of Location

Any change in the location of a service connection, provided such change is approved by the Company, will be made in accordance with Section 10 of this tariff.

**Alaska Power Company** 

STATE OF ALASKA REGULATORY COMMISSION OF ALASKA

#### **RULES AND REGULATIONS**

9. Billing and Collection

9.1 Rates

The Company provides electricity for sale under retail rate schedules designed to recover sufficient revenues from each class of customers to generally cover the costs to service that class. All services will be provided under either these retail rate schedules or under a special contract.

9.2 Bills Effectively Rendered

Service is billed on a monthly basis.

Bills for electric service will be considered rendered when:

(a) The bill is delivered to the customer personally; or

(b) The bill is mailed to the address on record or the last known address of the customer. The statement bill date is considered the day the bill was rendered. This date may not vary from the postmark date by more than 3 working days. or

(c) The bill or notification of the bill available online is sent electronically by email, text message or other means provided by the customer.

Failure to receive a bill or notice from the Company will not prevent the bills from becoming past due or delinquent or excuse the customer's responsibility for payment.

9.3 Bills Due

Bills of the Company are due when rendered and are payable at the offices of the Company or such other pay stations as the Company may designate. Any bill not paid within twenty-five (25) days after the date rendered will be considered past due and subject to a late charge and finance charge. All past due amounts and associated late charges from one billing cycle which are not received by the Company as of the close of the following billing cycle will be considered delinquent and subject the account to disconnection of service.

#### Alaska Power Company

State of Alaska Public Utilities Commission

(A) A statement advising the customer to contact the Company for information regarding deferred payment and other procedures which the Company may offer to avoid disconnection of the customer's service; and

(B) A list of any governmental or social assistance agencies, of which the Company is aware, that may offer energy assistance to qualified needy customers;

(5) A specific request that if a customer's residence is occupied by a person seriously ill, elderly, handicapped or dependent on life support systems, the customer should notify the Company immediately of such circumstances for consideration in avoiding disconnection;

(6) A statement advising the customer that the Company's stated reason for the termination of service may be disputed and potentially resolved by contacting the Company at a specified address or telephone number;

(7) A statement that the Company shall retain the right to terminate service after allowing a customer who disputes a bill the opportunity for a meeting if the Company continues to find that the reason for the disconnection is just;

(8) The telephone number and address of the Alaska Public Utilities Commission and a statement that the customer may file a complaint with the commission if not satisfied with the Company's response or resolution of any contested bill or tariff provision; and

(9) The amount of the Company's charges for disconnection and reconnection of service.

file a bill dispute complaint; and

(5) The amount of the charges for disconnection and reconnection of service.

Where the Company knows that a landlord/tenant relationship exists, the following provisions will apply:

(1) If the premises are individually metered, and the landlord is the customer of the Company, and would otherwise be subject to disconnection, the Company will notify the tenant/occupant in writing of the option of subscribing for service in the occupant's own name. The Company will not attempt to recover from the tenant or condition service to the tenant on the payment of any outstanding bills or other charges due from the outstanding account of the landlord. If, however, the tenant has a previously outstanding balance for the same class of service at any service location, or for any class of service at the same service address, the Company will condition service to that tenant as provided in Section 6. If the occupant declines to subscribe for individual service or arrange for payment of the delinquency, where applicable, within 10 days after written notice by the Company is mailed or delivered to the occupant, the Company may disconnect service without further notice.

(2) Where the premises are served by a master meter and the landlord is the customer of the Company and would otherwise be subject to disconnection, each tenant served through the master meter will be given individual notice by the Company of the pending disconnection at least 14 days prior to disconnection.

(3) Where the tenant is the customer of the Company and is subject to disconnection, the Company will attempt to notify the landlord in writing of the option of subscribing for the service provided at the

tenant's premises. The Company will not attempt to recover from the landlord or condition service to the landlord on the payment of any outstanding bills or other charges due from the outstanding account of the tenant. If, however, the landlord has a previously outstanding balance for the same class of service at any service location or for any class of service at the same service address, the Company will condition service to that landlord as provided in Section 6. If the landlord declines to subscribe for service or arrange for payment of the delinquency, where applicable, within 10 days after written notice is mailed or delivered to the landlord, then the Company may disconnect service without further notice.

The Company will serve at least 3 working days notice prior to disconnection of a customer who has failed to comply with a deferred payment agreement.

Within 10 days of the date specified on the "Shut-Off-Notice", the Company may, without further notice, disconnect service to a customer between the daily business hours of 8:00 a.m. on Monday to 5:00 p.m. on Thursday. Service will not be disconnected on a Friday or a day preceding a holiday.

The Company will not disconnect service to a customer for any of the reasons stated below:

(1) Delinquency in payment for services rendered to a prior customer at the premises where service is being provided, except in the instance where the prior customer continues to reside on the premises;

(2) Failure of the customer to pay for services or equipment which are not regulated by the Alaska Public Utilities Commission;

(3) Nonpayment of a bill related to another class of

not to exceed six months, or the period during which the most recent customer of record received service through the meter, whichever period is less.

If a residential meter is tested and found to have under-registered the amount of power delivered, the Company will not charge a customer for the underbillings unless there is evidence of meter or electric service tampering by the customer.

If the meter of a Commercial, or Bulk power customer is tested and found to have under-registered the amount of energy or power delivered, the Company will charge the customer for underbillings for usage for no more than four previous months unless there is evidence of meter or electric service tampering by the customer.

The Company will test a meter upon request of a customer and may charge the customer for the meter test per the Company's Schedule of Fees and Charges. However, the Company will not charge for the meter test if the meter is found to over or under-register by more than two percent and there is no evidence of meter or electric service tampering by the customer.

9.12 Change of Occupancy

Bills are rendered in the name of the person or entity shown in the Company's records as the party responsible for electric consumption at the specified location. Any change in occupancy, ownership or legal responsibility must be reported either in person or by written notice to the Company within a reasonable time prior to such change. The customer whose name is on record for that service will remain responsible for all charges until such notice of change is received by the Company. The new customer assuming account responsibility is to apply for service under Section 6.

9.13 Between Renters Agreement

Owners or operators of rental properties may sign a Between Renters Agreement for the automatic continuance of service in the owner's or operator's name during periods of vacancy between renters. During such periods of vacancy, the owner or operator will be billed the monthly service charges under the appropriate Rate Schedule. A Connection/Establishment of Service Fee as specified under Section 12, will be assessed for each occurrence and for each unit where service is reverted to the owner or operator.

#### 9.14 Disputes - Billing

Whenever a customer has a dispute concerning any bill or service, the customer should request the Company to investigate the grounds for dispute. The Company will respond to the substance of each dispute within the timeframes of Rule 1.8.

If this reply is not satisfactory to the customer and the differences cannot be reconciled by the Company's staff or management, the customer may request assistance from the Regulatory Commission of Alaska, 701 W. 8th Avenue, Suite 300, Anchorage, Alaska 99501-3469.

However the customer shall pay any undisputed amounts, and the Company may proceed to disconnect service in accordance with its disconnection procedures for failure to pay any undisputed amounts.

9.15 Bills Computed to the Kilowatt-hour

Meters without multipliers or constants will be read to the kilowatt-hour of consumption. The resulting bill will be computed to the kilowatt-hour.

9.16 Disclosure of Prior Consumption History

The Company may disclose the prior consumption and/or other relevant information at a particular service address to a new customer or prospective customer at that address for purpose of assisting the new customer in evaluating energy efficiency, etc.

### 9.17 Levelized Budget Billing Plan

The Levelized Budget Billing Plan is a voluntary billing option available to residential customers who submit the necessary enrollment application and are determined to be eligible based on the criteria outlined in section (1) below.

#### (1) Eligibility

Original

- (a) Customer has received service at location for at least 12 months.
- (b) Customer must enter program with an account balance of zero or have entered into a deferred payment agreement for any past due or delinquent amounts.
- (c) If the customer account shows a default on a previous payment agreement the customer will not be eligible to enter the program under payment agreement terms.

(d) Temporary and Seasonal service are not eligible for this program

#### (2) Calculation of Monthly Levelized Budget Bill Amount

The customer will pay a monthly amount equal to the average of the total of the most recent 12 months bills. After 12 months a new monthly levelized pay amount will be calculated based on the past 12 months actual bills less any over-recovery or plus any under-recovery from the prior year. Thus, any variance between actual billing and level pay billing is included in the calculation of the new level pay billing amount by spreading it over the 12 months in the new budget year.

#### (3) Bill Detail

The monthly bill of each level pay plan member will contain the following information relevant to the plan:

(a) Actual Consumption (kwh)

- (b) Amount due for actual consumption
- (c) Budget billing amount due

Tariff Advice No. 796-2

93

# Alaska Power Company

## 9.17 Levelized Billing (Continued)

## (4) Adjustments to Monthly Billing Amount

Alaska Power Company will adjust a customer's levelized billing annually or more frequently if the estimate of the customer's usage or cost varies significantly from the customer's actual usage or cost. The monthly payment may also be adjusted for changes in base rates or COPA (Cost of Power Adjustment) rates.

#### (5) Disputes

Customers who dispute the correctness of a bill shall notify Alaska Power Company and state reasoning in support of their position. Such notice shall not be sufficient reason to withhold payment of the normal monthly budget payment. Any adjustments will be made in the following billing cycle.

#### (6) Delinquency and Termination

If a customer participating in the plan fails to pay the budget billing obligation in any month by the due date, the budget payment shall be considered past due and they may be removed from the levelized billing plan. Once the customer is returned to regular billing, the total account balance will be due. Disconnection notification requirements will appy to any delinquent amount as determined on the aging of the actual account balance.

If the customer is removed from the Levelized Budget Billing Program, either by Alaska Power Company or at the customer request, the customer will not be eligible to participate in the Levelized program for one (1) year.

The customer may terminate this agreement at any time either verbally or in writing Once the customer leaves the program, the full account balance will be due. If the customer has a credit balance at the time of plan termination and is continuing service with Alaska Power Company, the credit will remain on their account and applied to future billings. If the customer is not continuing service with Alaska Power Company then the credit will be applied to the final bill and any residual credit will be refunded to the customer.

STATE OF ALASKA REGULATORY COMMISSION OF ALASKA

## Alaska Power Company

## Security Light Service

## AVAILABILITY:

This service applies to dusk-to-dawn lighting of private property where 120-volt service is available from existing overhead distribution lines. Such service shall be provided for a term of not less than twelve (12) consecutive months. This service is available in all of the Company's service areas.

#### TERMS AND CONDITIONS:

Installation will be limited to 100 watt lamps of standard design, as determined by the company. The Company may adopt another or different design to reflect improved technology, lower cost and other relevant considerations.

The Company will own and maintain the facilities for supplying security light services utilizing its overhead circuits in accordance with the Company's standards. The Company will furnish the necessary energy, repairs, and maintenance. Repair and maintenance work will be performed by the Company as required during its regularly scheduled working hours. Individual lamps will be replaced after failure as soon as reasonably possible after notification by the customer and subject to the Company's normal operating schedule.

Lighting facilities which are damaged by the malicious and/or recurring actions of third parties shall be subject to removal by the Company and/or payment by the customer for such damage.

The 100 watt lamps use 600 kwh per year. This will be billed to the customer's account at 50 kwh per month which will be added to the other kwh sold on their monthly bill.

| MONTHLY RATES: Using Existing Poles | \$6.28  |
|-------------------------------------|---------|
| Using An Additional Pole            | \$11.36 |

Energy Charge: In accordance with each community's Schedule No. A-1.

Cost of Power Adjustment: Billing under this schedule will be increased to reflect the amounts by which the weighted average cost of power per kwh sold exceeds the base rate and deceased to reflect the amount by which the weighted average cost of power is less than the base rate in accordance with each community's Schedule No. A-3.

Power Cost Equalization Program: These rates are eligible for power cost equalization in an amount per kwh identified on each community's Schedule No. A-5.

**SECTION 13** - NET METERING SERVICE

(Applicable to Eligible On-Site Generation Systems 25 kW or Less)

#### Conditions (Continued)

c. Generate electric energy from one or more of the following sources: Solar photovoltaic and solar thermal energy;

Wind energy;

Biomass energy, including landfill gas or biogas produced from organic matter, wastewater, anaerobic digesters, or municipal solid waste;

Hydroelectric, geothermal, hydrokinetic energy or ocean thermal energy; and, Other sources as may be approved by the Regulatory Commission of Alaska that generally have similar environmental impacts.

- d. Be operated and either owned or leased by the consumer, and
  - (A) Have a total nameplate capacity of no more than 25 kilowatts per consumer premises;
  - (B) Be located on the consumer premises;
  - (C) Be used primarily to offset part or all of the consumer's requirements for electric energy; and
  - (D) Include an inverter adequate to ensure the generated power is compatible with the the Company system.
- 6) The Company reserves the right to refuse net metering service to a customer if interconnection causes the total nameplate capacity of all eligible consumer generation systems participating in net metering to exceed 1.5 percent of the Company's average retail demand.
- 7) The Company will not terminate net metering service to any customer in the event the Company's average retail demand decreases such that the nameplate capacity of existing net metered customers exceeds 1.5 percent of the Company's average retail demand.

# 1.0 Construction of the Generating Facility

After APC executes the Interconnection Agreement by signing the Applicant's Net Metering application, the Applicant may construct the Generating Facility, including interconnected operational testing not to exceed two hours.

## 2.0 Interconnection and Operation

The Applicant may operate the Generating Facility and interconnect with APC's Electric Delivery System once all of the following have occurred:

2.1 The Generating Facility has been inspected and approved by the appropriate local electrical wiring inspector with jurisdiction, and the Applicant has sent documentation of the approval to the Utility, and

2.2 The Utility has either:

2.2.1 Inspected the Generating Facility and has not found that the Generating Facility fails to comply with a Level 1 technical screen or a UL and IEEE standard; or

2.2.2 Waived its right to inspect the Generating Facility by not scheduling an inspection in the allotted time; or

2.2.3 Explicitly waived the right to inspect the Generating Facility.

# 3.0 Safe Operations and Maintenance

The Interconnection Customer shall be fully responsible to operate, maintain, and repair the Generating Facility as required to ensure that it complies at all times with IEEE Standard 1547.

#### 4.0 Access

APC shall have access to the metering equipment of the Generating Facility at all times. APC shall provide reasonable notice to the Interconnection Customer when possible prior to using its right of access.

#### 5.0 Disconnection

APC may temporarily disconnect the Generating Facility upon the following conditions:

5.1 For scheduled outages upon reasonable notice.

5.2 For unscheduled outages or emergency conditions.

5.3 If the Generating Facility does not operate in the manner consistent with these terms and conditions of the Agreement.

5.4 The Utility shall inform the Interconnection Customer in advance of any scheduled disconnection, or as is reasonable after an unscheduled disconnection.

# 6.0 Indemnification

Each Party shall at all times indemnify, defend, and save the other Party harmless from, any and all damages, losses, claims, including claims and actions relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the indemnified Party's action or inactions of its obligations under this Agreement on behalf of the indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the indemnified Party.

# 7.0 Insurance

The Interconnection Customer is required to maintain standard general liability insurance coverage as part of this Agreement and is required to provide proof of insurance. Standard homeowners insurance coverage is defined as coverage sufficient to replace your home and its contents.

### 8.0 Limitation of Liability

Each Party's liability to the other Party for any loss, cost, claim, injury, liability, or expense, including reasonable attorney's fees, relating to or arising from any act or omission in its performance of this Agreement, shall be limited to the amount of direct damage actually incurred. In no event shall either Party be liable to the other Party for any indirect, incidental, special, consequential, or punitive damages of any kind whatsoever, except as allowed under paragraph 6.0.

# 9.0 Termination

9.1 This Agreement may be terminated under the following conditions:

9.1.1 By the Interconnection Customer: By providing written notice to APC.

9.1.2 By APC: If the Generating Facility fails to operate for any consecutive 12month period or the Interconnection Customer fails to remedy a violation of these terms and conditions of the Agreement.

9.2 Permanent Disconnection: In the event the Agreement is terminated, APC shall have the right to disconnect its facilities or direct the Interconnection Customer to disconnect its Generating Facility.

9.3 Survival Rights: This Agreement shall continue in effect after termination to the extent necessary to allow or require either Party to fulfill rights or obligations that arose under the Agreement.

# 10.0 Assignment

1. For a Generating Facility offsetting part or all of the load of a utility customer at a given site, that customer is the Net Metering Customer and that customer may assign this application / agreement to a subsequent occupant of the site. For a Generating Facility providing energy directly to APC, the Interconnection Customer is the owner of the Generating Facility and may assign this application / agreement to a subsequent owner of the Generating Facility. Assignment is only effective after the assignee provides written notice of the assignment to the Utility and agrees to accept the Interconnection Customer's responsibilities under the Interconnection Agreement.

#### INTERCONNECTION REQUIREMENTS FOR NET METERING POWER PRODUCERS

This document states the minimum requirements for the safe and reliable operation of Customer-owned generating facilities (25 kW or smaller in size) that will be eligible to be connected and operated in parallel with the ALASKA POWER COMPANY, (APC) utility system under APC's NET METERING Program. Customer-owned generating facilities that are fueled by: (a) Wind; (b) solar energy; (c) geothermal energy; (d) landfill gas; (e) wave or tidal action; (f) gas produced during the treatment of wastewater; (g) qualified hydropower; or (h) biomass energy based on solid organic fuels from wood or field residues, or dedicated energy crops that do not include wood pieces that have been treated with chemical preservatives, are eligible to become NET METERING facilities.

NET METERING facilities shall not be fueled or connected to any non-qualified alternative energy sources.

1. <u>Compliance with Laws</u>. Construction and installation of a NET METERING facilities shall be in compliance with all applicable national, state, and local construction and safety codes. Once operating, APC reserves the right to require the Customer, at the Customer's expense, to provide corrections or additions to their existing protective devices in the event of future modification of government or industry regulations and standards.

2. <u>Placement of Customer-owned NET METERING Facilities</u>. To maintain the existing APC distribution system's power quality and reliability, only one NET METERING facility per distribution transformer will be authorized. This requirement may be waived by APC when APC, in its sole discretion, deems it appropriate under the circumstances.

3. <u>Power Quality and Reliability</u>. The interconnection of the NET METERING facility with the APC utility system shall not cause any reduction in the quality and reliability of service provided to other Customers. There shall be no objectionable generation of abnormal voltages or voltage fluctuations, and the harmonic content of the NET METERING facility output must be below that level which would cause undue interference with other Customer loads, other utilities, or APC facilities and equipment.

To minimize all interference, APC requires the NET METERING facilities to meet the power quality standards presented in Section 10 Recommended Practices for Individual Consumers of the latest IEEE Std. 519, IEEE Recommended Practices and Requirements for Harmonic Control in Electrical Power Systems. In addition, to meeting all requirements identified in this document, the NET METERING facility shall comply with APC's Operating Tariff and IEEE 1547.

4. <u>Testing</u>. Prior to initial energization of the NET METERING facility, inspection and/or tests will be jointly performed by both the Customer and designated APC personnel. Purpose of the testing is to determine if the generator and related equipment

of the NET METERING facility meets the minimum safety requirements described by IEEE 929 and UL 1741 and IEEE1547. Customer is solely responsible for ensuring properties on of its NET METERING facility. Further tests may be required on individual systems. The Customer is responsible for the costs associated with testing and/or retesting inverters and power generating units that do not meet UL 1741 and IEEE 1547.

5. <u>Inspection and Customer Maintenance Records</u>. The Customer shall maintain the NET METERING facility in good working order. The NET METERING facility (*i.e.*, generator and associated equipment) may be subject to inspection by APC upon reasonable notice, but APC assumes no duty to inspect said facility. The Customer will assume full responsibility for the routine maintenance of the NET METERING facility, associated protective devices, and the keeping of records for such maintenance. These records shall be available to APC for inspection at all times upon reasonable notice to the Customer, but APC assumes no duty to inspect said records.

6. <u>Visible, Lockable Disconnect Switch</u>. An accessible, visible, lockable disconnect switch is to be provided by the Customer in an appropriate circuit which is lockable in the open position only. This switch shall be located at or near the main structure, the utility service entrance, or some mutually agreed upon location with proper signage.

(A) This switch, when locked in the open position for any of the following conditions, may be unlocked only by APC operating personnel. APC will lock open the switch under the following circumstances:

(a) If it is necessary for the protection of line crew personnel when working on de-energized circuits during a system emergency.

(b) If inspection of the NET METERING facility reveals a hazardous condition or a lack of proper maintenance.

(c) If the NET METERING facility interferes with other Customers, other utilities, or with the operation of APC's distribution system.

(d) If APC determines that the NET METERING facility has generated power from a non-qualified alternative energy resource.

(e) For general maintenance of APC's distribution system.

The installed switch will be locked open by APC for the above conditions (a), (b), (c) and (d). APC will provide reasonable notice before locking the switch open for general maintenance as provided in condition (e) above.

(B) If the Customer declines to install a Visible, Lockable Disconnect Switch, consent is implied to allow APC Operating Personnel to disconnect all electric service to the entire site, if APC, at its sole discretion, anticipates any of the circumstances (a)-(d) in Section 6(A).

7. <u>Metering</u>. APC shall install and maintain a kilowatt-hour meter, or meters at the NET METERING facility capable of registering the bi-directional flow of electricity at the Point of Interconnection at a level of accuracy that meets all applicable standards, regulations and statutes. The meter(s) may measure such parameters as time of

delivery, power factor, voltage and such other parameters as APC shall specify in its softeommession of ALASKA discretion. The Customer shall provide space for metering equipment as specified by APC with the location of the meter(s) to be approved by APC.

8. <u>Nominal Voltages and Phasing</u>. The generator nameplate voltage should be the same as one of the nominal voltages supplied by APC. The nominal voltages are 120/240 V single-phase, 120/240 V three-phase, 120/208 V three-phase, and 277/480 V three-phase. If the generator nameplate voltage is different from APC's nominal voltages, the Customer must supply a dedicated generator transformer. The preferred transformer connection, unless otherwise specified, is grounded wye-grounded wye.

9. <u>Fault Current Increase and Upgrading Equipment</u>. In general, installation of a new generator will increase the fault current level at the Customer's electrical facility. This may require upgrading some of the Customer's equipment. The Customer will assume full responsibility of upgrading Customer's own equipment.

10. <u>Starting as Induction Motor</u>. In general, induction generators start as motors and also synchronous generators may be designed to start as motors. The Customer-owned generator starting as a motor shall meet the motor starting requirements prescribed by APC. APC may require the Customer to provide, at Customer's own expense, special or additional starting equipment.

11. <u>Generating Facility Grounding</u>. There are additional safety concerns that should be addressed when considering circuit grounding of the NET METERING facility interconnected to APC's utility system. To ensure proper grounding of the generating facility, the Customer should follow all applicable national, state, and local codes regarding grounding.

12. <u>Synchronization</u>. The NET METERING facility must be synchronized with APC's utility system at all times and the Customer shall be responsible for the cost and maintenance of synchronization.

13. <u>Automatic Disconnection and Time-Delayed Automatic Reconnection</u>. The NET METERING facility shall be designed to automatically disconnect and lockout when APC's service is interrupted for any reason. Automatic reconnection of the NET METERING facility to APC's utility system shall be done only on Hot-Bus/Hot-Line/Sync-Check at least five minutes after the automatic disconnection.

14. <u>Single Phasing Protection</u>. The Customer is advised that a phase-unbalance disturbance on APC's utility system can result in overheating of the NET METERING facility. A negative- sequence-type relay (current or voltage) could be necessary to initiate tripping under phase-unbalance conditions and may also be used to block closing of the automatic reconnection device if APC's utility system is single-phased.

15. <u>Generating Facility Protection</u>. The Customer is fully responsible for the protection of the generator and all of its associated equipment. Protection should be provided for the Customer's own equipment failures, faults and other disturbances on APC's utility

#### STATE OF ALASKA

system. The Customer shall provide equipment specifications, protection arrangements and some of ALASKA design drawings to APC for review and written approval prior to installation.

16. <u>Fault Detection and Automatic Isolation</u>. To prevent a NET METERING facility from supplying current to a fault on APC's utility system, the NET METERING facility shall be equipped to provide isolation from APC's utility system for any fault on the APC's utility system. The automatic isolation shall be done prior to the APC breaker (or recloser) reclosing and within a reasonable period of time, typically less than two seconds (120 cycles).

17. <u>Under/Over Voltage Relay</u>. To prevent any hazardous operating conditions, the NET METERING facility shall be isolated from APC's utility system for any under-voltage (lower than 80 percent of nominal voltage) and over-voltage conditions (higher than 110 percent of nominal voltage) within two seconds (120 cycles).

18. <u>Under/Over Frequency Relay</u>. To prevent any hazardous operating conditions, the NET METERING facility shall be isolated from APC's utility system for any over-frequency and under-frequency conditions within a reasonable period of time. The Customer's frequency relay settings will be reviewed and approved by APC prior to start-up of the NET METERING facility.

19. <u>No Automatic Reclosing</u>. The APC feeder circuit breaker control scheme is normally designed to have at least one automatic reclosing in order to minimize unnecessarily prolonged outages. To minimize potentially hazardous conditions or equipment damage due to non-synchronized operation caused by automatic reclosing, no automatic reclosing of the NET METERING facility breaker (or interrupting device) shall be allowed.

20. <u>Dedicated Distribution Transformer</u>. To ensure reliable service to other APC Customers and to minimize all possible problems for other APC Customers, the NET METERING facility shall be interconnected to the APC utility system through a dedicated-to-single-Customer distribution transformer. Any cost of new APC facilities to achieve dedicated-to-single-Customer service shall be the Customer's sole expense. This requirement may be waived by APC on a case-by-case basis, when it deems appropriate, in its sole discretion.

21. <u>Single-phase Generating Facility on Three-phase Distribution Transformer</u>. In general, a Customer-owned single-phase generating facility greater than 10kW shall not be allowed to be connected to an APC three-phase distribution transformer. This requirement may be waived by APC on a case-by-case basis, when it deems appropriate, in its sole discretion.

22. <u>Surge Protection</u>. The Customer is responsible for the protection of Customer's NET METERING facility from transient surges initiated by lighting, switching, or other system disturbances.

23. <u>Future Modification or Expansion</u>. Any future modification or expansion of the NET METERING facility will require a separate engineering review and approval by APC.
